PROJECT MANAGEMENT

ISBN. 978-93-5062-340-8

PROJECT MANAGEMENT

Project management means planning, organising, motivating and controlling the available men and materials to achieve specific goals in an organisational setup. A project has a defined beginning and an end with constraints of time, funding and/or deliverables. It is a temporary task designed to produce a unique product, service or result, and is undertaken to meet unique goals and objectives that bring benefits or add value to the existing product or service.

A project manager is a professional who is responsible for accomplishing the stated project objectives. He/she is required to create clear and attainable project objectives, build project requirements and manage the constraints of the project management.

This book is for both beginners and professionals. It discusses the basics of project management, lifecycle of a project, planning for a project, Project Evaluation and Review Technique (PERT), computerised project management, project financing, comparison between long- and short-term financing, project implementation and project feasibility study.

This book would encourage professionals in various industries to start practicing project management as a profession. It is also a valuable text for beginners who wish to perfect their project management skills.
